

Assignment: HTML Basics – Practical Assignment

Part A: Short Theory Questions Answer briefly (2–3 lines each).

1. What does HTML stand for?

HTML stands for **HyperText Markup Language**. It is the standard markup language used to create and structure content on web pages, such as text, images, links, and headings.

2. What is the difference between a Tag and an Element?

A **Tag** is the markup code enclosed in angle brackets, such as `<p>` or `</p>`.

An **Element** consists of the opening tag, the content, and the closing tag together, for example:
`<p>This is a paragraph.</p>`.

3. What is an Attribute?

An **Attribute** is additional information added to an HTML element using the opening tag. It helps define properties or behavior of the element. For example, in ``, `src` is an attribute that specifies the image source.

4. What is Semantic HTML?

Semantic HTML uses meaningful tags such as `<header>`, `<nav>`, `<article>`, and `<footer>` to clearly describe the content's purpose and structure. It improves readability, accessibility, and SEO.

5. Why is the `alt` attribute important for images?

The `alt` attribute provides alternative text for an image if it cannot be displayed. It also helps screen readers describe images to visually impaired users, improving accessibility.
